## ENOSERV *RTS*™

An automated relay testing software package for relay maintenance workgroups

ENOSERV *RTS*™ is relay testing software that is built for fast, efficient and accurate testing. Relay engineers and field personnel will standardize and:

1. have the best tool available for **automated relay testing**
2. be able to **quickly and easily share the results** of testing
3. be able to **quickly and easily share the latest, most up-to-date test routines**
4. be able to **quickly and easily share notes** and knowledge about specific relays and relay test routines
5. be able to **test relays and submit reports faster than ever**

### Advantages

#### Test with different manufacturers' test sets

- ENOSERV *RTS*™ standardizes relay testing on any test set it supports. Always apply the same testing methodologies no matter what test set is used.

#### Over 450 pre-written test routines are included

- ENOSERV *RTS*™ test routines are industry-tested and accurate.

#### Create a new test in four easy steps with FasTest

- If you have a relay that's not in the RTS Library, create a new test yourself using FasTest technology. Creating new tests takes less than a minute! FasTest technology means the entire RTS interface is built for manipulation and flexibility, allowing standard testing philosophies to be applied quickly and accurately.

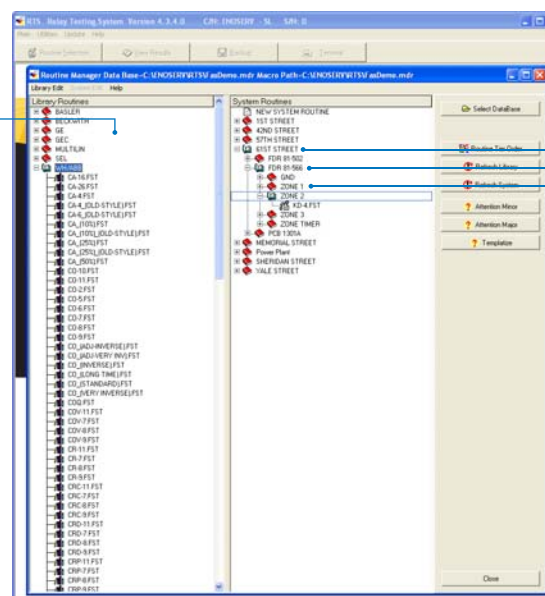

#### Test with completely automated test routines for microprocessor-based relays

- Settings downloads and test procedures operate at digital speed.

“RTS makes it easier to get into the more complex relays for novices. We had those 87T's from Basler that are fairly complex. What we were doing before RTS...#1 we didn't have the equipment to do the testing with, and #2 we didn't have the automation. Therefore we outsourced and once a year I would get this bill from the outsourcing guys for an amount like \$14,000 or \$22,000. I wondered, what is so hard? After I got RTS, I didn't outsource that testing anymore. A company pays a very small price for RTS. It leverages whatever test set you have, makes it go three times as fast AND technicians can get into the more complex testing easily. Someone has read all the instruction books for you. Someone has read all of the IDs & pulled out all of the settings. It tells you how to hook the relay up. I felt great that first year I didn't have that outsourcing bill to take to my manager.”
